

Dear Vivek, Pratyush, and the Sarvam team,

Just applied to the Product Manager (Chanakya) role. Sending this because the JD describes the architectural pattern I have already shipped at ESC, and I want to make sure the application lands.

The Chanakya thesis (replicable, deployable AI product components built on top of Sarvam's stack) maps directly to three atoms I have shipped in the last five months at ESC. **VaultIQ** is an air-gapped Claude Opus financial intelligence platform running inside the customer VPC: no data egress, multi-tenant access controls, SSO, role-based permissions on Postgres with pgvector. This is the closest analog I can imagine to the on-premises and air-gapped bonus on the JD. **Maya AI** is the multi-tenant autonomous-agent atom: an event-driven agent on Oracle CCS unifying voice, chat, SMS, email, and mobile for a 200K-resident utility. **Conference Outreach Automation** is the agentic-workflow atom: 3-workflow generate-to-approve-to-send pipeline routed through Microsoft Teams adaptive cards.

The forward-deployed discipline the JD asks for is the way I have always worked. At NEP, I sat with supervisors for two weeks before writing the first line of Maya AI. At SALL, the 8-factor scoring algorithm came from the advisor team's intuition mapped into a structured pre-filter. At CloudApproach (UK + MENA), the entire client base of 200+ agency partners was field-built. Engineers at ESC describe my PRDs as "clear and free of assumptions" because I write the decision log first; the spec follows.

On the ruthless-prioritization point: the Maya AI backlog has had three serious feature requests cut this quarter (a multi-tenant supervisor cockpit redesign, a CRM-side write-back, and a Slack-channel mirror). Each one was declined with a written reasoning trail showing why the eval framework, the takeover-frequency SLO, or the deployment cadence would have suffered. Saying no with reasoning is the muscle Chanakya's defence and enterprise clients will need from this seat.

Where I am honest about the gap: I do not have direct defence, government, or national-security domain experience. What I do have is high-stakes regulated-adjacent work (City of Rochester fraud detection, NEP critical-utility deployment, VaultIQ air-gapped financial intelligence) and the rigor that comes with it. The procurement-cycle reflexes are a ramp, not a foundation.

Before ESC, I bootstrapped and exited two ventures across UK and MENA (**\$575K combined exit, 95% post-acquisition retention, \$5M+** in enterprise deals influenced on a **\$200K** marketing budget). Direct revenue accountability is how I have always operated.

One open question I would love to discuss in screen one: the JD lists Bengaluru on-site. I am US-based on STEM OPT through 2027 and willing to relocate. If there is any remote-from-US flexibility for the first 6 to 12 months while the seat ramps, I would love to know. Either way, the substance match is real and I would rather have the conversation early.
