

LinkedIn Messages: Sarvam AI Product Manager Chanakya

Personalized DMs for Sarvam's two co-founders. Chanakya's careers page does not list a hiring contact, so the founders are the right entry points. Pratyush is the more reachable and technical; Vivek is the more public-facing and is the natural anchor for the sovereign-AI angle.

Pratyush Kumar, Co-founder of Sarvam AI (ex-AI4Bharat, ex-IBM Research)

Short (connection request)

Hi Pratyush, just applied to the Chanakya PM role at Sarvam. I'm the first AI hire at ESC, where I ship deployable atoms: VaultIQ (air-gapped Claude Opus inside the customer VPC), Maya AI (multi-tenant agent for a 200K-resident utility), Conference Outreach (HITL agentic). Forward-deployed is the only mode I work in. Would love to connect.

Hi Pratyush,

Just applied to the Product Manager (Chanakya) role at Sarvam. Reaching out because the JD describes the architectural pattern I have already shipped at ESC, and I want to make sure the application lands.

The Chanakya thesis (replicable, deployable AI atoms on top of Sarvam's stack) maps to three things I have shipped in the last five months. VaultIQ is the air-gapped Claude Opus atom inside the customer VPC: no data egress, multi-tenant access controls, SSO, role-based access on Postgres with pgvector. Maya AI is the multi-tenant agent atom on Oracle CCS for a 200K-resident utility: 26-language voice, Bedrock routing across Opus + Sonnet + Nova, confidence + sentiment + takeover frequency tracked as SLOs. Conference Outreach is the agentic-workflow atom: 3-workflow generate-approve-send pipeline routed through Microsoft Teams adaptive cards.

On the discipline the JD asks for: I sit with customers before I write specs. Two weeks at NEP before Maya was scoped. Five-advisor observation at SALL before the 8-factor scoring was written. ESC engineers describe my PRDs as "clear and free of assumptions." Saying no with a written decision log is a weekly muscle.

Where I am honest: I do not have defence or national-security experience. High-stakes regulated-adjacent is what I have shipped (City of Rochester fraud detection, NEP critical-utility, VaultIQ financial intelligence). Procurement-cycle reflexes are a ramp.

Before ESC, I bootstrapped and exited two ventures across UK + MENA (\$575K combined exit, 95% post-acquisition retention, \$5M+ in enterprise deals influenced).

One open question for screen one: the JD says Bengaluru on-site. I am US-based on STEM OPT, willing to relocate. Defence-sector residency rules sometimes need an early call, so I would rather raise it now than later.

Shivam

Vivek Raghavan, Co-founder and CEO of Sarvam AI (ex-AI4Bharat, ex-CPM UIDAI/Aadhaar)

Short (connection request)

Hi Vivek, just applied to the Chanakya PM role at Sarvam. The Aadhaar architecture is one of the public-infrastructure builds I have studied most closely. Currently ship deployable atoms at ESC: VaultIQ (air-gapped Claude Opus in customer VPC), Maya AI (200K residents). Would love to connect.

Hi Vivek,

Just applied to the Product Manager (Chanakya) role at Sarvam. Reaching out because Chanakya is the layer where sovereign-AI actually meets the customer, and the Aadhaar architecture work you led at UIDAI is the public-infrastructure build I have studied most closely.

I am the first AI hire at ESC Partners. In the last five months, I have shipped three atoms that map cleanly to the Chanakya thesis. VaultIQ runs Claude Opus inside the customer VPC with no data egress (the closest analog I can offer to the on-prem and air-gapped bonus). Maya AI is a multi-tenant agent on Oracle CCS for a 200K-resident utility (26-language voice, Bedrock routing, confidence + sentiment + takeover SLOs). Conference Outreach is a 3-workflow agentic pipeline routed through Microsoft Teams adaptive cards.

Forward-deployed is the only mode I work in. Two weeks of NEP supervisor sit-throughs before Maya was scoped. Five-advisor observation at SALL before the scoring spec was written. Four-and-a-half years field-built across 200+ agency clients in UK + MENA at CloudApproach and Approachables (\$575K combined exit, \$5M+ enterprise deals influenced).

Where I am honest about the gap: I do not have defence or national-security experience. The transferable discipline is high-stakes regulated-adjacent. The procurement-cycle and clearance ramps are a ramp, not a foundation.

One honest question for screen one: the JD lists Bengaluru on-site. I am US-based on STEM OPT through 2027, willing to relocate, but defence-sector residency rules sometimes require an early call. Would love to align on what is feasible.

Shivam

Notes

- Pratyush is more technical and tends to engage on substance; lead with him.
- Vivek is more public-facing; the Aadhaar reference is the genuine personal anchor and ties to the sovereign-AI thesis Chanakya sits inside.
- The defence-experience gap and the Bengaluru-on-site question both need to be raised in screen one. Do not bury either.
- If a defence or strategic-sector hiring manager surfaces during the loop, replace the founder-specific anchor with one line about the relevant atom (VaultIQ air-gapped or Maya AI critical-utility).
