

LinkedIn Messages: Sarvam AI Product Manager On-Device and Edge AI

Personalized DMs for Sarvam's two co-founders. Sarvam's careers page does not list a hiring contact for this seat, so the founders are the right entry points. Pratyush is the more reachable and technical; Vivek is the more public-facing.

Pratyush Kumar, Co-founder of Sarvam AI (ex-AI4Bharat, ex-IBM Research)

Short (connection request)

Hi Pratyush, just applied to the On-Device + Edge AI PM role at Sarvam. I'm the first AI hire at ESC, where I ship VaultIQ (air-gapped Claude Opus inside the customer VPC) and Maya AI (multi-tenant SaaS agent on Microsoft Teams and Outlook, 200K residents). Enterprise-inside-the-perimeter is the surface I work in. Would love to connect.

Hi Pratyush,

Just applied to the Product Manager (On-Device and Edge AI) role at Sarvam. Reaching out because the JD describes enterprise AI inside the customer security perimeter, which is exactly what I have been shipping at ESC for the last five months.

VaultIQ is the closest analog I can offer to Sarvam's on-device thesis: air-gapped Claude Opus inside the customer VPC, no data egress, multi-tenant access controls, SSO, role-based permissions on Postgres with pgvector, Terraform-deployed for repeatable customer-perimeter installs. Maya AI is the multi-tenant SaaS side: DynamoDB tenant governance, 17 admin APIs, 24-hour key rotation, deep Microsoft Teams + Outlook integration, HITL through adaptive cards. Both shipped end-to-end as the first AI hire at ESC.

Where I am honest: I have not directly shipped Intune or SCIM. The transferable rigor is multi-tenant SaaS, OAuth2 SSO, role-based access, Microsoft ecosystem integration, and structured enterprise rollouts. Entra ID + SCIM are a first-30-days ramp.

Before ESC, I bootstrapped and exited two B2B ventures across UK + MENA (\$575K combined exit, 95% post-acquisition retention, \$5M+ in enterprise deals influenced). IT admin sign-off was the gating step for every CloudApproach contract.

One open question for screen one: the JD lists Bengaluru on-site. The on-device line works with silicon partners that include US-based companies (Qualcomm, Intel, NVIDIA, Apple), so a remote-from-US window for the first 6 to 12 months might actually be a strategic fit. Either way, would love to align early.

Shivam

Vivek Raghavan, Co-founder and CEO of Sarvam AI (ex-AI4Bharat, ex-CPM UIDAI/Aadhaar)

Short (connection request)

Hi Vivek, just applied to the On-Device + Edge AI PM role at Sarvam. The Aadhaar architecture work is one of the public-infrastructure builds I have studied most closely. Currently shipping enterprise-inside-the-

perimeter at ESC: VaultIQ (air-gapped Claude Opus in customer VPC), Maya AI (200K residents, Microsoft ecosystem). Would love to connect.

Hi Vivek,

Just applied to the Product Manager (On-Device and Edge AI) role at Sarvam. Reaching out because on-device sovereign AI is where Sarvam's biggest moat compounds, and the Aadhaar architecture work you led at UIDAI is the public-infrastructure build I have studied most closely.

I am the first AI hire at ESC Partners. VaultIQ runs air-gapped Claude Opus inside the customer VPC with no data egress, multi-tenant access controls, and role-based permissions. Maya AI is the multi-tenant SaaS agent on Oracle CCS for a 200K-resident utility, integrated deeply with Microsoft Teams (HITL adaptive cards) and Outlook (email-triage agent). Both shipped end-to-end on Claude Code. Both as the sole AI on staff.

The enterprise on-device surface (multi-tenant, role-based, MDM-adjacent, audit-grade) is the surface I have been working in. Where I am honest: I have not directly shipped Intune or SCIM. The transferable rigor is real; the brand-specific tools are a first-30-days ramp.

Before ESC, I bootstrapped and exited two ventures across UK + MENA (\$575K combined exit, \$5M+ in enterprise deals influenced on a \$200K marketing budget). Sovereign-AI-on-device feels like the next chapter of the public-infrastructure story you have been building since UIDAI, and the enterprise on-device seat is the one where I would compound fastest.

One honest question for screen one: the JD lists Bengaluru on-site. I am US-based on STEM OPT through 2027, willing to relocate. The silicon-partner geography (Qualcomm + Intel + NVIDIA + Apple) might make a remote-from-US window a strategic fit for the first 6 to 12 months. Either way, I would rather raise it now than later.

Shivam

Notes

- Pratyush is more technical and tends to engage on substance; lead with him.
- Vivek is more public-facing; the Aadhaar reference is the genuine personal anchor.
- The on-device line has a unique angle: silicon partners are largely US-based, which gives the remote-from-US conversation a strategic frame, not a workaround frame. Use that.
- MDM / Intune / SCIM gap should be surfaced in screen one, not buried. The transferable rigor is multi-tenant SaaS + OAuth2 SSO + Microsoft ecosystem integration.
- If a hiring manager for the on-device line surfaces during the loop, replace the founder-specific anchor with one line about Sarvam Kaze or the relevant silicon-partner deployment.
