Hiring Team

MicroAI — Director of Technology

777 Meadow Creek Drive, Irving, Texas 75038

Dear MicroAI Hiring Team,

I build things and ship them. In the last six months: **Maya AI** on Oracle CCS for a 200K+ resident utility client, a standalone email triage agent I spun off Maya's core intelligence, **VaultIQ** (an internal air-gapped financial platform running Claude Opus on AWS Bedrock), a 3-workflow conference outreach automation for our CRO, and the career-ops pipeline I built on Claude Code to apply for this role. Before ESC Partners, I was AI Product Management Intern at Vollie, Inc. in Buffalo, AI Product Consultant at Senior Assisted Living Locators, and Graduate AI Product Intern at the Ain Center for Entrepreneurship at the University of Rochester. I have also started and exited two companies, **\$575K** combined, with **\$5M+** in deals influenced across the UK and MENA.

Maya is what I am most proud of, and it is also why MicroAI caught my eye. The verticals you serve — **Telecom, Manufacturing, Utilities, Energy, Transportation** — are the customers I have been shipping to. Utility companies run everything on Oracle CCS: billing, outages, service requests, payment plans. When a customer calls, a human agent logs in, digs through Oracle, and manually responds. Maya sits on top of Oracle CCS and does that automatically. It understands what the customer is asking across voice, chat, SMS, email, and mobile, pulls the right data, and handles the transaction autonomously. If it is not sure, it drafts a response, pings a supervisor in real time, and waits for one click before sending. Sentiment tracking, live dashboards, one-click human takeover, **26 languages** via 11 Labs, multi-tenant DynamoDB governance with **17 admin APIs** and 24-hour key rotation. I built it in **2.5 months** as the only AI hire. It is live at NEP (200K+ residents), rolling out at Moreno Valley Electrical Utility, piloting at Delta Utilities. Projected **~\$225K/month** savings for the lead client.

The AI Technical Product Manager scope you describe — driving AI product strategy, partnering with data scientists and ML engineers on model deployment and MLOps, owning the end-to-end lifecycle from concept to ROI, defining product architecture for scalability across enterprise and OEM environments, customer engagement to refine model interpretability and trust — is the work I just did end-to-end at ESC. Doing it at MicroAI's edge / cloud footprint, where the customer profile and integration surface I already know meet Industry 4.0 and IoT primitives I want to learn, is the next step I am looking for.

You can see Maya behind a [live SALL demo](#), a [walkthrough video](#), and the rest of the work at [shivamsportfolio.webflow.io](https://shivamsportfolio.webflow.io). Available immediately and open to relocate to DFW.

Sincerely,

Shivam Sharma
