Hiring Team

Google — YouTube Youth, Trust & Safety
San Bruno, CA

Dear Google YouTube Hiring Team,

I am applying for the Product Manager I role on YouTube Youth, Trust & Safety. The architectural pattern you describe — AI proactively identifies potential violations, explains the policy rationale clearly, guides creators through automated remediation, and escalates to a human reviewer when confidence is low — is exactly the loop I built end-to-end at ESC Partners as the sole AI hire on staff.

At ESC I built **Maya AI**, the agentic AI platform behind a **200K+** resident utility on Oracle CCS. Maya unifies voice, chat, SMS, email, and mobile and autonomously executes account, billing, payment-plan, and outage workflows; it handles **70–80%** of first-touch volume across every channel. The parts most relevant to your role: an **HITL approval loop** — when confidence drops below threshold, Maya drafts a response, pings a supervisor in Microsoft Teams via an adaptive card, and waits for one-click approval before sending; a **real-time supervisor cockpit** with sentiment, confidence scoring, and conversation history that lets non-technical operators safely supervise the AI at scale; and an **abuse-mitigation governance layer** with 17 admin APIs, 24-hour key rotation, and tenant-level audit trail. I shipped it in **2.5 months** as the sole AI hire and the platform is now rolling out at Moreno Valley Electrical Utility and piloting at Delta Utilities.

The pattern is the right one for creator policy enforcement: AI handles the high-confidence cases autonomously, surfaces the lower-confidence ones with clear explanations to a human reviewer, and tunes the threshold based on outcome data. The vertical shift from utility customer transactions to creator policy violations on YouTube is a domain ramp; the architecture transfers cleanly. On the consumer-product side, I have shipped 0-to-1 across **Senior Assisted Living Locators** (300+ weekly consultations matched in under 2 seconds), **Vollie** (voice AI coaching to first paying client), and **VentureForge** (50+ MBA students, 200+ founders) — consumer products from concept to launch with cross-functional Engineering, UX, and Data Science partnership.

One additional proof point on interpretability: I built an **explainable XGBoost + SHAP fraud-detection model** for City of Rochester loan officers via Simon Vision Consulting — same pattern Trust & Safety reviewers need when an algorithm flags content. Two prior exits (\$575K combined, \$5M+ deals influenced) taught me to ship in weeks and to write the governance and rollback plan before scaling. I am ready to relocate to the Bay Area.

You can see Maya behind a [live SALL demo](#), a [walkthrough video](#), and the rest of the work at shivamsportfolio.webflow.io.

Sincerely,
Shivam Sharma
