Hiring Team, DET Sales
Salesforce

Dear Salesforce Hiring Team,

I build autonomous AI agents and ship them. As the first and only AI hire at ESC Partners, I shipped **Maya AI** in 2.5 months, an agent platform overlaid on Oracle CCS that handles **70-80%** of first-touch support volume across voice, chat, SMS, email, and mobile for utility customers. It is live at NEP (**200K+** residents), rolling out at Moreno Valley Electrical Utility, and piloting at Delta Utilities. I also spun off a standalone email triage agent on Maya's core intelligence, built VaultIQ (an air-gapped financial intelligence platform running Claude Opus on AWS Bedrock for our CRO), and shipped a 3-workflow conference outreach automation with Microsoft Teams adaptive-card approvals. Before ESC, I started and exited two companies for **\$575K** combined.

Maya is what is most relevant to this role. Utility companies run everything on Oracle CCS: billing, outages, service requests, payment plans. When a resident calls, an agent logs in, digs through Oracle, manually responds. Maya sits on top and does that automatically: it understands intent across channels, pulls the right data, and executes the transaction. If it isn't sure, it drafts a reply, pings a supervisor in real time, and waits for one click before sending. Sentiment tracking, live performance dashboards, one-click human takeover, 26 languages via 11 Labs. It was Customer Zero for our company before it was a product, and I owned every piece of it: the vision, the backlog, the INVEST-compliant stories, the sprint planning, the UAT, the cross-functional alignment with sales and support ops.

The DET Sales role reads like the same playbook on a different platform. Take a CRM (yours is Salesforce, mine was Oracle CCS) and overlay an autonomous agent layer (Agentforce, Sales Cloud, Slack, Data Cloud for you; custom-built for me) that makes Sales AEs faster, automates complex sales workflows, and reduces customer attrition. The Salesforce stack is new to me, I will be honest about that, but the shape of the work is exactly what I have been doing, and I close platform gaps fast. I can be productive on Sales Cloud and Agentforce in weeks, not months.

The Customer Zero framing in the JD is exactly how I worked at ESC: dogfood internally, fix what breaks under real workloads, then ship to customers. That is how you build agents people trust, and it is the part of this role I am most excited about: being the first user of what Salesforce ships its own customers.

Available immediately and open to relocate to Indianapolis or Dallas. Portfolio: shivamsportfolio.webflow.io.

Sincerely,
Shivam Sharma
