

LinkedIn Messages: Glean, Product Manager, AI Quality

Personalized DMs for the three highest-impact contacts at Glean. Short version fits a LinkedIn connection-request note; long version is for InMail or a post-connection follow-up.

Arvind Jain, Founder & CEO of Glean

Short (connection request)

Hi Arvind, just applied to the PM, AI Quality role for Glean Model Hub. I'm the first AI hire at ESC, where Maya AI routes production traffic across Claude Opus, Sonnet, and Nova on Bedrock for a 200K-resident utility. Customer-side version of Model Hub. Would love to connect.

~295 characters

Long (InMail or post-connection)

Hi Arvind,

Just applied to the PM, AI Quality role for Glean Model Hub. Reaching out because the JD describes the work I've been shipping one customer at a time for the last six months, and I'd love to make sure the application doesn't get lost in the stack.

I'm the first AI hire at ESC Partners. Built Maya AI from scratch in 2.5 months on Claude Code: an autonomous agent platform on Oracle CCS for a 200K-resident utility. Maya runs production traffic through AWS Bedrock, routing across Claude Opus, Sonnet, and Nova based on intent, confidence, and cost-per-call. The supervisor cockpit tracks sentiment, takeover frequency, and confidence as service-level objectives. It's the customer-side version of Glean Model Hub.

Before ESC, two exits across UK and MENA: \$575K combined, 95% post-acquisition retention. Founder's the only mode I've ever run in.

Would love 15 minutes if there's room. Happy to walk through Maya AI's routing layer in code or share whatever's most useful for the interview loop.

Tamar Yehoshua, President of Product and Technology at Glean

Short (connection request)

Hi Tamar, just applied to the PM, AI Quality role for Glean Model Hub. The leadership stack you're running (Search at Google, CPO at Slack) is the gravity that drew me here. I'm shipping the customer-side analog of Model Hub at ESC right now. Would love to connect.

~285 characters

Long (InMail or post-connection)

Hi Tamar,

Just applied to the PM, AI Quality role for Glean Model Hub. Reaching out because the product gravity you're carrying (Google Search, Slack CPO) is exactly the kind of operating bar I want to learn at, and I think my profile is a sharper match than the resume gives me credit for.

I'm the first AI hire at ESC Partners. In 2.5 months I built Maya AI: an autonomous agent platform on Oracle CCS for a 200K-resident utility, routing production traffic across Claude Opus, Sonnet, and Nova on AWS Bedrock. Sentiment, takeover frequency, and confidence tracked as SLOs. The supervisor cockpit is the operator surface. It's the local version of what Model Hub does at platform scale.

Before ESC, I bootstrapped and exited two ventures across UK and MENA, \$575K combined, 95% post-acquisition retention. Founder mode is how I've always worked.

Would love 15 minutes whenever there's room. Happy to walk through Maya AI's routing layer or bring a Day 1 framework for Model Hub if it's useful.

Emrecan Dogan, Head of Product at Glean

Short (connection request)

Hi Emrecan, just applied to the PM, AI Quality seat for Model Hub. I'm the first AI hire at ESC, building Maya AI's Bedrock routing layer (Opus/Sonnet/Nova) for a 200K-resident utility. Customer-side version of the Hub. Would love 15 minutes if you have room.

~280 characters

Long (InMail or post-connection)

Hi Emrecan,

Just applied to the PM, AI Quality role for Glean Model Hub. Reaching out because you're likely closest to the hiring loop for this seat, and I think the substance match is uncommon enough to be worth a direct note.

For the past six months at ESC Partners, I've been the first AI hire. I built Maya AI from scratch in 2.5 months on Claude Code: an autonomous agent on Oracle CCS for a 200K-resident utility, routing production traffic across Claude Opus, Sonnet, and Nova on AWS Bedrock. Confidence, sentiment, and takeover frequency tracked as service-level objectives. The supervisor cockpit ships every operator surface a non-technical user needs. It's a local-scale version of what Model Hub does at platform scale.

Before ESC, two prior exits across UK and MENA, \$575K combined. Founder's the only mode I've ever operated in.

Would love 15 minutes whenever there's room. Happy to bring a Day 1 framework for Model Hub or walk through Maya AI's routing layer in code, whichever is most useful for the interview loop.

Notes

- All three short versions fit inside the 300-character connection-request limit.
- If a connection request bounces, send the long version as InMail (Glean's leadership is likely Premium-reachable).

- Tamar's note leans on her product gravity (Google Search + Slack CPO) because that's likely the personal anchor that resonates most.
- Emreca's note is the most hiring-loop-direct because he's Head of Product and probably owns the offer call.
- Arvind's note is the founder-to-founder card.
- Mention the application explicitly in every version so context lands fast.
