

Dear Guild.ai Hiring Team,

I have spent the past six months building the customer-side analog of Guild's control plane. As ESC Partners' first AI hire, I owned **Maya AI** from vision to launch in **2.5 months**: an autonomous, event-driven agent platform on Oracle CCS that unifies voice, chat, SMS, email, and mobile for a **200K-resident utility**. The agent understands customer intent, pulls data from Oracle, and executes billing, payment, and outage transactions without a person having to step in. When confidence drops, it pings a supervisor in Microsoft Teams via an adaptive card and waits for one-click approval. I built the supervisor cockpit too: real-time sentiment, performance dashboards, and one-click human takeover so non-technical operators stay in control. 11 Labs gives me 26 languages on voice. NEP is live with **200K+ residents**; Moreno Valley Electrical and Delta Utilities are next.

The Product Manager role at Guild reads like the next logical step. I find the part of a workflow where AI actually changes the outcome, build the thing on **Claude Code**, and make sure non-technical people can use it without me in the room. I have been doing that for one customer at a time. Doing it as a platform, where every enterprise can govern, audit, and scale their agents from one place, is the problem I want to work on next.

Before ESC, I was the sole PM on Vollie's 0-to-1 voice AI coaching platform (first paying client, seed milestone). Before that, I bootstrapped and sold two ventures across UK and MENA for **\$575K combined**, with **95% post-acquisition retention**. Founder mentality, technical empathy, and the ability to translate ambiguity into shipped product are not things I have read about. They are how I have spent the last six years.

Available immediately. Open to relocating to San Francisco.
