

Dear OpenAI Team,

Just applied to the PM, API Agents role. Sending this because the JD describes the work I have been shipping one customer at a time at ESC, and I want to make sure the application lands.

I am the first AI hire at ESC Partners. I built Maya AI from scratch in 2.5 months on Claude Code: an autonomous, event-driven agent platform on Oracle CCS for a 200K-resident utility. Maya routes production traffic through AWS Bedrock across Claude Opus, Sonnet, and Nova based on intent, confidence, and cost-per-call. The supervisor cockpit tracks sentiment, takeover frequency, and confidence as service-level objectives, with one-click human takeover when the model is uncertain. It is the customer-side version of the agentic primitives the OpenAI API team is building at platform scale.

What I have not done: led a developer-platform contract or owned the SDK release cycle for millions of users. What I have done: shipped 17 admin APIs with key rotation and multi-tenant governance at Maya AI, plus the 3-workflow Conference Outreach pipeline on n8n that is a working agent-tool surface for an internal team. Same product muscle, different scale.

Before ESC, I was sole PM on Vollie's 0-to-1 voice AI coaching platform. Before that, I bootstrapped CloudApproach and Approachables across UK and MENA. Two ventures, \$575K combined exit, 95% post-acquisition retention, \$5M+ in deals influenced on a \$200K marketing budget. Founder is the only mode I have ever run in.

Happy to walk through Maya AI's routing layer in code, or bring a one-page Day 1 framework for the Agents API. Whichever helps the interview loop.

Available immediately. Open to relocating to San Francisco within 30 days of offer.
