

Dear Plaud team,

Just applied to the Agent Product Manager, Agent Tools role. Sending this because the JD describes the loop I already run at ESC, and I want to make sure the application lands.

I am the first AI hire at ESC Partners. I built Maya AI from scratch in 2.5 months on Claude Code: an autonomous, event-driven agent platform on Oracle CCS for a 200K-resident utility. Every agent action ships through confidence scoring, takeover frequency, and sentiment as service-level objectives. The tool-use design across Claude Opus, Sonnet, and Nova on AWS Bedrock, plus the supervisor cockpit operator surface, are the customer-side version of what "Architect the Plaud Agent Tooling Ecosystem" describes.

What I have not done: authored JSON Schemas at the scale of a public agent platform. What I have done: shipped structured tool-use in production, 17 admin APIs, and a 3-workflow agentic pipeline on n8n. The schema formalism is a week of ramp.

Before ESC, I was sole PM on Vollie's 0-to-1 voice AI coaching platform. Before that, I bootstrapped CloudApproach and Approachables across UK and MENA. Two ventures, \$575K combined exit, 95% post-acquisition retention. Founder is the only mode I have ever run in.

Plaud is a builder's company. \$250M ARR bootstrapped, 1.5M+ devices, 170 countries. That velocity is what I want next.

Happy to walk through Maya AI's tool layer in code, or bring a one-page schema design for a Plaud agent tool. Whichever helps.

Available immediately. Open to relocating to San Francisco within 30 days of offer.
