

Dear Tony and the Plaud team,

Just applied to the Agent Product Manager role. Sending this because the JD describes the loop I run every day at ESC, and I want to make sure the application lands.

I am the first AI hire at ESC Partners. I built Maya AI from scratch in 2.5 months on Claude Code: an autonomous, event-driven agent platform on Oracle CCS for a 200K-resident utility. Maya ships every agent action through confidence scoring, takeover frequency, and sentiment tracked as service-level objectives. The supervisor cockpit lets a non-technical operator see, edit, or override any action with one click. The tool-use schemas, the prompt design across Claude Opus, Sonnet, and Nova on AWS Bedrock, and the Ground-Truth-style eval framework are exactly the kind of work "Architect the Plaud Agent Tooling Ecosystem" describes.

What I have not done: authored JSON Schemas at the scale of a public agent platform. What I have done: shipped tool-use designs in production, 17 admin APIs, and a 3-workflow agentic pipeline on n8n with Microsoft Teams adaptive cards as the operator surface. Same product muscle, different formalism. The schema layer is a week of ramp.

Before ESC, I was sole PM on Vollie's 0-to-1 voice AI coaching platform. Before that, I bootstrapped CloudApproach and Approachables across UK and MENA. Two ventures, \$575K combined exit, 95% post-acquisition retention, \$5M+ in deals influenced. Founder is the only mode I have ever run in.

Plaud is a builder's company. \$250M ARR bootstrapped, hardware + software, 1.5M+ devices across 170 countries. That kind of velocity is what I am looking for next.

Happy to walk through Maya AI's routing layer in code, or bring a one-page schema design for a Plaud agent tool. Whichever is most useful.

Available immediately. Open to relocating to San Francisco within 30 days of offer.
