

Dear Sruti and the Valdera team,

Just applied to the Product Manager role at Valdera. Sending this because the JD describes work I have already been doing at ESC for one vertical at a time, and I want to make sure the application lands.

I am the first AI hire at ESC Partners. I built Maya AI from scratch in 2.5 months on Claude Code: an autonomous, event-driven agent platform on Oracle CCS for a 200K-resident utility. Maya routes production traffic through AWS Bedrock across Claude Opus, Sonnet, and Nova based on intent and confidence. The supervisor cockpit on top is the React UX layer, with one-click human takeover, real-time sentiment, and confidence-based routing. The product motion is identical to what Valdera describes: ship AI-native autonomous agents into a vertical that runs on legacy data and processes, with a craftsmanship bar on every detail of the experience.

What I have not done: chemicals or raw materials sourcing specifically. What I have done: vertical AI for a utility that runs on Oracle CCS, with a 30-day customer-discovery cycle that mapped supervisor workflows into a shipped product. My 30-day plan for Valdera week one: shadow five sourcing managers at Fortune 500 manufacturers, ride along on real RFP cycles, then map the workflow into a one-page narrative.

Before ESC, I was sole PM on Vollie's 0-to-1 voice AI coaching platform. Before that, I bootstrapped CloudApproach and Approachables across UK and MENA. Two ventures, \$575K combined exit, 95% post-acquisition retention. Founder mode is the only mode I have ever run in.

The Valdera role is 8 months old on LinkedIn. If the seat is still open and the job description still reflects the work, I would love a quick conversation.

Available immediately. Open to relocating to San Francisco for the on-site role.
