SUMMARY

AI Product Engineer (MS in Artificial Intelligence, STEM, Simon Business School). Ships production agentic AI end-to-end: tool-calling agents, RAG pipelines, human-in-the-loop autonomy, and the evaluation and deployment infrastructure behind them. First AI hire at ESC Partners: took **Maya AI** live at a **200K-resident utility** in **2.5 months**. Built an explainable fraud-detection model for the **City of Rochester (62% to 73% accuracy)**. Two bootstrapped exits totaling **\$575K**. **Drawn to Lector because Medicare and Medicaid fraud detection only works when auditors get an evidence chain they can act on; that standard shaped the Rochester model, and it is the work I want to scale.**

PROFESSIONAL EXPERIENCE

AI Product Engineer ESC Partners

January 2026 to Present
Rochester, New York

- **Architected and shipped Maya AI**, a production agent on Oracle CCS unifying voice, chat, SMS, email, and mobile: intent classification routes each request to tool calls that execute billing, payment plans, start/stop service, and outage transactions autonomously. Handles **70 to 80%** of first-touch volume at NEP (**200K+ residents**), with rollouts underway at two more utilities.
- **Built the serving and state layer** in Python (FastAPI) on AWS Bedrock with model routing across Claude Opus, Sonnet, and Nova; DynamoDB conversation state and tenant governance behind **17 admin APIs**; voice coverage in **26 languages** through 11 Labs.
- **Designed the human-in-the-loop autonomy path**: low-confidence drafts reach supervisors as Microsoft Teams approval cards, with a live React console that tracks sentiment, scores response confidence, and hands control to a human in one click.

AI Product Consultant Senior Assisted Living Locators

October 2025 to January 2026
Remote

- **Built an AI recommendation engine** processing **300+ weekly consultations**, matching senior families to **250+ care communities** in under **2 seconds**; a two-phase data pipeline (hard-constraint pre-filter, then 8-factor scoring) cut **API costs by roughly 70%**.

AI Product Management Intern Vollie, Inc.

May 2025 to December 2025
Buffalo, New York

- **Owned the 0-to-1 build** of a voice AI coaching platform; landed the **first paying client (30 employees)**. Closed-loop engine with real-time transcription, sentiment and commitment scoring, and a privacy-first data model.

Co-Founder CloudApproach and Approachables (Acquired)

July 2019 to March 2024
United Kingdom + MENA

- **Bootstrapped and sold two ventures** across the UK and MENA for **\$575K combined**, with **95%** client retention after acquisition; scaled to **200+** agency clients and **\$5M+** in deals influenced on a **\$200K** budget.

EDUCATION

Simon Business School, University of Rochester Master of Science in AI in Business (STEM-Certified)

New York
December 2025

Leadership: Vice President, Masters Advisory Council. Simon Strong Community Builder Award.

University of Central Lancashire Bachelor of Arts (Honors), International Business and Management

Preston, United Kingdom
May 2020

PROJECTS

- **City of Rochester Fraud Detection (Simon Vision Consulting)**: Explainable fraud-screening model for a city loan program: **XGBoost** with **SHAP** attribution lifted accuracy from **62% to 73%** and produced reason codes loan officers could defend in review. Government fraud detection built around an audit trail.
- **VaultIQ**: Air-gapped financial intelligence platform running Claude Opus on AWS Bedrock entirely inside the customer VPC: pgvector retrieval over analyst documents, Terraform-defined installs, SSO and role-based access. Built for restricted-data environments where nothing crosses the boundary.

SKILLS

Agentic AI: RAG Pipelines, Tool-Calling Agents, Agent Orchestration, Context and State Management, Human-in-the-Loop Autonomy, Intent Classification, Model Evaluation, Prompt Engineering, Multi-Tenant SaaS, Air-Gapped Deployment.

Engineering: Python, FastAPI, AWS Bedrock, Claude (Opus, Sonnet, Nova), Claude Code, React, Next.js, Postgres with pgvector, DynamoDB, Terraform, n8n, XGBoost, SHAP explainability, REST APIs, OAuth2, Microsoft Teams and Outlook integration, 11 Labs Voice.
